

Piedmont/Low Mountain Alluvial Forest occur on alluvial flats along some parts of the stream. A canopy of tulip tree and red maple are dominant, though occasional sycamore and river birch also occur. The understory contains mostly ironwood, sweet gum, and saplings of the canopy species. Black walnut is also present. The shrub layer is patchy, with invading thickets of Chinese privet (*Ligustrum sinense*). The herb layer supports sedges (*Carex* spp.), fringed sedge (*Carex crinita*), blackberry (*Rubus* sp.), trumpetvine (*Campsis radicans*), false wood nettle (*Boehmeria cylindrica*), jack-in-the-pulpit (*Arisaema triphyllum*), greenhead coneflower (*Rudbeckia laciniata*), fish-on-a-string (*Chasmanthium latifolium*), a flatsedge (*Cyperus* sp.), and sparse to dense Japanese grass (*Microstegium vimineum*), a non-native species.
